PYTHON  
PROJECTS

MUST-HAVE LIBRARIES FOR  
PYTHON MASTERY

# LIBRARIES BY USE

Python Libraries are available for almost all types of digital and cloud services and products. Libraries are created for solving a problem.

---

## GENERAL PURPOSE

Python Libraries that provide basic environment setup, enable secure execution and create common work space

## COMPUTE SERVICE

Python Libraries that process the data or information given to them and provides some form of Analysis, Results, Charts and Models

## DATA API SERVICE

Python Libraries that act as conduit for accessing the data in a remote location. These libraries can be wrappers around webapis or can have direct data access

**Problem : How to find the  
Python Library that is  
helpful for most activities**

# CURATED LIBRARIES

## GENERAL PURPOSE

1. **JUPYTER**
2. **REQUESTS**
3. **WARNINGS**
4. **OS**
5. **CONFIGPARSER**
6. **GLOB**
7. **JSON**
8. **OPENPYXL**

## COMPUTE

**PANDAS**  
**STREAMLIT**  
**PSYCOPG2**  
**SQLALCHEMY**  
**DBT**  
**PYSPARK**  
**FASTAPI**  
**AWSWRANGLER**

## DATA API

**PYTUBE**  
**NSEPYTHON**  
**KAGGLE**  
**WBANK API**  
**PYGITHUB**  
**STACKAPI**  
**YFINANCE**

# PROBLEM: HOW TO START LEARNING

## SOLUTION

Know only the basics of using the library first. After you have started to use, then you can learn the details

# GENERAL PURPOSE LIBRARIES

**Problem:** Mastering the libraries and use them at daily work or activities

**Solution:**

- Introduction of the Library
- 4 unique examples that show the commands
- Examples code shared in github
- Additional resources shared

# COMPUTE LIBRARIES

**Problem:** These libraries requires multiple steps to achieve a task. Even If one task fails, how to be motivated to learn further?

**Solution:**

- Introduction of the library
- Walkthrough of library features
- In detail use case walkthrough
- Sharing data + code in github
- Sharing Additional resources

# DATA LIBRARIES

**Problem:** Takes a lot of time to get the necessary data and then use it productively. Reading the documentation and trying demotivates

<https://github.com/insightbuilder>

## **Solution:**

- Introduction of the library
- Listing out the top 5 to 10 methods
- Create a visual chart with Data
- Code shared in GitHub
